

MCAL Integration for MCALs using EB Tresos™ Studio

Multimedia Link

<http://www.vector.com/MIP/3rdPartyTool>

Description

This screen cast explains how a 3rd Party MCAL using the configuration tool EB Tresos™ Studio is integrated with the Vector AUTOSAR Solution. It treats the recommended workflow "Mixed configuration tool usage" with the tools EB Tresos™ 13.0.0 and DaVinci Configurator 5.

Restrictions

There might be some deviations regarding your specific project:

- > The document Technical Reference MCAL Integration Package might not be part of your delivery package
- > The layout of the 3rd Party McalIntegrationHelper tool and the guidance through the user dialogs might be different to your delivery package depending on the delivered tool version; this can also affect other tools like EB Tresos™ or DaVinci Configurator
- > Some other details like the folder structure or the derivative handling depend on the 3rd Party MCAL packages and their versions respectively on the method and version of the Vector integration.
